

**Supplementary Figure S9:** Complementation of the *HVO\_0758* deletion mutant growth phenotype in glycerol medium. Presented are growth curves of the parent strain H26 with the empty vector control (H26 evc) in orange, the deletion mutant  $\Delta$ HVO\_0758 with the empty vector ( $\Delta$ HVO\_0758 evc) in blue and the complementation strain  $\Delta$ HVO\_0758+HVO\_0758CHis in yellow. Complex medium was used for preculture before shifting to synthetic medium with glycerol as carbon source. Mean values and SD of six technical replicates are shown. One representative of three biological replicates is presented.
