

Supplementary Figure 3. (A) Validation of the IMC results obtained on the TMA on whole slides. Bars represent the absolute cell numbers per mm² in n=9 NSCLC whole slides (each dot is the mean of 3 ROIs for each slide). Immune cells preferentially localize in stromal regions. *p<0.05 by Mann Whitney. **(B)** Kaplan-Meier curve showing DFS of n=72 patients classified as desert (n=47), excluded (n=7) or inflamed (n=18). P=0.042 by long-rank Mantel-Cox (inflamed vs excluded).
