

Supplementary Fig. 4. Histological and immunohistochemical analysis of murine ear tissue. C57BL/6J mice were treated with oxazolone or EtOH (as vehicle control) and exposed or not to 5 mg/m³ pinewood emissions. Histological localization of eosinophils (arrows, H&E), and immunohistochemical localization of macrophages (IBA1) and CD4⁺ T-helper cells (CD4) in representative ear tissue samples. Scale bar: 30 μ m.
